

Course Roadmap

In this course, you'll learn about relational and nonrelational databases and the extract, transform, and load (ETL) process. You'll learn how to gather data, ensure data quality, locate the appropriate storage or database, and evaluate insights. You'll gain hands-on skills that will prepare you for real-world scenarios.

MODULE 01

Foundations of Data Analysis

- Business use case assessment
- ETL and ELT data-processing
- Understanding the differences between structured, unstructured, and semistructured data
- The importance of metadata

MODULE 02

ETL Pipeline and Database Foundations

- The ETL pipeline
- Differentiating between SQL and NoSQL databases
- Common SQL queries

MODULE 03

AWS Services for ETL

- Amazon API Gateway
- Amazon QuickSight
- Amazon Relational Database Service (Amazon RDS)
- Identifying the right service for the job
