

Course Roadmap

In this course, you start with an accelerated introduction to Python and then learn how to host a serverless solution with Amazon API Gateway, AWS Lambda, and Amazon DynamoDB. This course is designed to give you a conceptual understanding of Python and structured query language (SQL).

MODULE

01

Beginning with Python

Developing in a team
Roles in software
Python introduction

Variables
Conditionals
Loops

Functions
Lists
Dictionaries

MODULE

02

Serverless Architectures

Microservices
AWS Lambda
APIs
Amazon API Gateway

AWS Serverless Application
Model (AWS SAM)
AWS SDKs
AWS Identity and Access
Management (IAM) roles

MODULE

03

AWS for Databases

Amazon Relational
Database Service
(Amazon RDS)
Database integration

AWS Secrets Manager
Amazon DynamoDB

MODULE

04

Application Integration Services

Amazon EventBridge
Amazon Simple Notification Service (Amazon SNS)
Amazon Simple Queue Service (Amazon SQS)
